Package 'rscopus'

September 17, 2019

```
Type Package
Title Scopus Database 'API' Interface
Version 0.6.6
Date 2019-09-17
Maintainer John Muschelli <muschellij2@gmail.com>
Description Uses Elsevier 'Scopus' API
      <a href="https://dev.elsevier.com/sc_apis.html">https://dev.elsevier.com/sc_apis.html</a> to download
      information about authors and their citations.
License GPL-2
Depends R (>= 3.0.0)
Imports httr, jsonlite, utils, stats, plyr, tidyr, dplyr, tools, glue
LazyData TRUE
Suggests xml2, rvest, graphics, testthat, jpeg, knitr, rmarkdown,
      purrr
URL https://dev.elsevier.com/sc_apis.html,

abstract_retrieval 3

abstract_retrieval

SCOPUS Abstract Retrieval

Description

This function wraps <code>generic_elsevier_api</code> to give a retrieval of an abstract from the Elsevier Abstract Retrieval API

Usage

```
abstract_retrieval(id, identifier = c("scopus_id", "eid", "doi", "pii",
   "pubmed_id", "pui", "group_id"), http_end = NULL, ...)
```

Arguments

Value

List of elements, similar to generic_elsevier_api

See Also

```
generic_elsevier_api
```

```
api_key = get_api_key(NULL, error = FALSE)
if (!is.null(api_key)){
    x = abstract_retrieval("S1053811915002700", identifier = "pii",
    verbose = FALSE)
    x = abstract_retrieval("S1053811915002700", identifier = "pii",
    view = "FULL",
    verbose = FALSE)
}
```

4 affiliation_retrieval

```
{\it affiliation\_retrieval} \ \ {\it SCOPUS\,Affiliation\,Retrieval}
```

Description

This function wraps generic_elsevier_api to give a retrieval of an affiliation from the Elsevier Affiliation Retrieval API

Usage

```
affiliation_retrieval(id, identifier = c("affiliation_id", "eid"),
  http_end = NULL, ...)
```

Arguments

id	Identifier for affiliation
identifier	Type of identifier to use
http_end	any additional end to http statement. See generic_elsevier_api
	Arguments to be passed to generic_elsevier_api

Value

List of elements, similar to generic_elsevier_api

See Also

```
generic_elsevier_api
```

```
api_key = get_api_key(NULL, error = FALSE)
if (!is.null(api_key)){
    x = affiliation_retrieval("60006183", identifier = "affiliation_id",
    verbose = FALSE)
}
```

affil_df

af	f	i	1	d	f
u i		_	_	_~	

Search Affiliation Content on SCOPUS

Description

Searches SCOPUS to get information about documents on an affiliation

Usage

```
affil_df(affil_id = NULL, affil_name = NULL, api_key = NULL,
  verbose = TRUE, facets = NULL, sort = "document-count", ...)
affil_data(affil_id = NULL, affil_name = NULL, api_key = NULL,
  verbose = TRUE, facets = NULL, sort = "document-count", ...)
```

Arguments

affil_id	Affiliation ID number.
affil_name	affiliation name. Disregarded if affil_id is specified
api_key	Elsevier API key
verbose	Print diagnostic messages
facets	Facets sent in query. See https://dev.elsevier.com/api_docs.html
sort	sorting sent to query
	Arguments to be passed to author_search

Value

List of entries from SCOPUS

Note

The affil_data command will return the list of all entries as well as the data.frame

See Also

```
get_author_info
```

6 affil_search

affil_list_to_df

List of SCOPUS Entries to List of Affiliations Data Frames

Description

Take a SCOPUS entry and transform it to a data frame of affiliations

Usage

```
affil_list_to_df(affils)
```

Arguments

affils

List of affiliations, from entries_to_affil_list

Value

A data.frame of affiliation information. A column named "index" denotes the element of the object affils that the row corresponds to

affil_search

Search Author Content on SCOPUS

Description

Searches SCOPUS to get information about documents on an author.

Usage

```
affil_search(affil_id, searcher = "AF-ID",
  http = "https://api.elsevier.com/content/search/affiliation",
  facets = "affilcountry(sort=document-count)", count = 200, ...)
```

Arguments

affil_id	Affiliation ID number
searcher	Identifier for Affiliation ID. Do not change unless you know exactly what the API calls for.
http	Address for scopus api
facets	Facets sent in query. See https://dev.elsevier.com/api_docs.html
count	<pre>number of records to retrieve (below 200, see https://dev.elsevier.com/ api_key_settings.html)</pre>
	Arguments to be passed to author_search

all_possible_affils 7

Value

List of entries from SCOPUS

See Also

```
get_author_info
```

```
all_possible_affils Find all affiliations
```

Description

Take a SCOPUS entry and transform it to a data frame of all affiliations listed in there

Usage

```
all_possible_affils(entries)
```

Arguments

entries

list of entries from SCOPUS, usually from author_search result

Value

A data. frame of affiliations

article_retrieval

ScienceDirect Article Retrieval

Description

This function wraps <code>generic_elsevier_api</code> to give a retrieval of an article from the Elsevier Article Retrieval API

Usage

```
article_retrieval(id, view = c("META", "META_ABS", "META_ABS_REF",
   "FULL", "REF", "ENTITLED"), identifier = c("scopus_id", "eid", "doi",
   "pii", "pubmed_id"), http_end = NULL, ...)
```

8 author_df

Arguments

Value

List of elements, similar to generic_elsevier_api

See Also

```
generic_elsevier_api
```

Examples

```
api_key = get_api_key(NULL, error = FALSE)
if (!is.null(api_key)){
    x = article_retrieval("S1053811915002700", identifier = "pii",
    verbose = FALSE, view = "FULL")
    gen = x$content$`full-text-retrieval-response`
    ot = gen$originalText
} else {
    x = article_retrieval("S1053811915002700",
    identifier = "pii",
    api_key_error = FALSE)
}
```

author_df

Search Author Content on SCOPUS

Description

Searches SCOPUS to get information about documents on an author. Note, author_list returns a list of the entries from author_search, but allows you to put in a name.

Usage

```
author_df(au_id = NULL, last_name = NULL, first_name = NULL,
    api_key = NULL, verbose = TRUE, all_author_info = FALSE,
    http = "https://api.elsevier.com/content/search/scopus",
    view = "COMPLETE", count = 25, general = TRUE, scrub = FALSE,
    headers = NULL, ...)
author_df_orig(..., general = FALSE)
```

author_df 9

Author ID number. Overrides any first/last name argument

```
author_list(au_id = NULL, last_name = NULL, first_name = NULL,
    api_key = NULL, verbose = TRUE,
    http = "https://api.elsevier.com/content/search/scopus",
    view = "COMPLETE", count = 25, headers = NULL, ...)

author_data(..., verbose = TRUE, all_author_info = FALSE,
    general = TRUE, scrub = FALSE)
```

Arguments

au_id

last_name	last name of author	
first_name	first name of author	
api_key	Elsevier API key	
verbose	Print diagnostic messages	
all_author_info		
	Should all author info be recorded instead of that just to the author given	
http	Address for scopus api	
view	$type\ of\ view\ to\ give,\ see\ https://api.elsevier.com/documentation/ScopusSearchAPI.$ wadl	
count	<pre>number of records to retrieve (below 25, see https://dev.elsevier.com/ api_key_settings.html)</pre>	

general Should gen_entries_to_df instead of the way before version 0.5.10.9001

Should 'scrub_identifier' be run on the identifier?

Headers passed to add_headers, passed to GET

Arguments to be passed to outbook accords

... Arguments to be passed to author_search

Value

List of entries from SCOPUS

Note

The author_data command will return the list of all entries as well as the data. frame.

See Also

```
get_author_info
```

```
if (have_api_key()) {
res = author_df(last_name = "Muschelli", first_name = "John",
verbose = FALSE)
}
```

10 author_retrieval_id

```
author_retrieval_id SCOPUS Author Retrieval
```

Description

This function wraps <code>generic_elsevier_api</code> to give a retrieval of an author from the Elsevier Author Retrieval API

Usage

```
author_retrieval_id(id, identifier = c("author_id", "eid"),
  http_end = NULL, ...)

multi_author_retrieval(id, identifier = c("author_id", "eid"),
  http_end = NULL, ...)

author_retrieval(au_id = NULL, last_name = NULL, first_name = NULL,
  view = c("LIGHT", "STANDARD", "ENHANCED", "METRICS", "ENTITLED"),
  self_cite = c("include", "exclude"), http_end = NULL,
  verbose = TRUE, api_key = NULL, headers = NULL, ...)
```

Arguments

id	Identifier for author
identifier	Type of identifier to use
http_end	any additional end to http statement. See generic_elsevier_api
	Arguments to be passed to generic_elsevier_api
au_id	Author ID number. Overrides any first/last name argument
last_name	last name of author
first_name	first name of author
view	Which view to see. See https://api.elsevier.com/documentation/AuthorRetrievalAPI.wadl
self_cite	Should self-citations be included?
verbose	Print diagnostic messages
api_key	Elsevier API key
headers	Headers passed to add_headers, passed to GET

Value

List of elements, similar to generic_elsevier_api

Note

```
See \verb|https://api.elsevier.com/documentation/AuthorRetrievalAPI.wadl for documentation| \\
```

author_search 11

See Also

```
generic_elsevier_api
```

Examples

```
api_key = get_api_key(NULL, error = FALSE)
if (!is.null(api_key)){
    x = author_retrieval(au_id = "40462056100",
    verbose = FALSE)
    x = author_retrieval_id("40462056100", identifier = "author_id",
    verbose = FALSE)
} else {
    x = author_retrieval_id(
    "40462056100",
    identifier = "author_id",
        api_key_error = FALSE, verbose = FALSE)
    x = author_retrieval(
    au_id = "40462056100",
        api_key_error = FALSE, verbose = FALSE)
}
```

author_search

Search Author Content on SCOPUS

Description

Searches SCOPUS to get information about documents on an author.

Usage

```
author_search(au_id, api_key = NULL,
http = "https://api.elsevier.com/content/search/author", count = 200,
start = 0, verbose = TRUE, facets = "subjarea(sort=fd,count=350)",
searcher = "AU-ID", max_count = Inf, view = c("STANDARD",
   "COMPLETE"), add_query = NULL, headers = NULL, wait_time = 0, ...)
```

Arguments

au_id	Author ID number
api_key	API Key for Elsevier
http	Address for scopus api
count	number of records to retrieve (below 200, see https://dev.elsevier.com/api_key_settings.html)
start	where should the records start gathering
verbose	Print diagnostic messages
facets	Facets sent in query. See https://dev.elsevier.com/api_docs.html

Identifier for author ID. Do not change unless you know exactly what the API calls for.

max_count

Maximum count of records to be returned.

view

type of view to give, see https://api.elsevier.com/documentation/AuthorSearchAPI.

wadl

add_query

Things to add to the query parameter for the request
headers

additional headers to be added to add_headers

wait_time The time in seconds to wait across consecutive requests of a single search (when

records > 25)

... Arguments to be passed to the query list for GET

Value

List of entries from SCOPUS

See Also

```
get_author_info
```

Examples

```
## Not run:
author_search(au_id = "Smith", searcher = "affil(princeton) and authlast")
berk = author_search(au_id = "berkeley", searcher = "affil", count =100)
## End(Not run)
```

```
author_search_by_affil
```

Search Authors by Affiliation on SCOPUS

Description

Searches SCOPUS to get information about authors with a certain affiliation

Usage

```
author_search_by_affil(affil_id, searcher = "AF-ID", ...)
```

Arguments

affil_id Affiliation ID number
searcher Identifier for Affiliation ID. Do not change unless you know exactly what the API calls for.

... Arguments to be passed to GET

bibtex_core_data 13

Value

List of entries from SCOPUS

See Also

```
get_author_info
```

Description

Makes a bibtex entry from an output of abstract_retrieval or article_retrieval

Usage

```
bibtex_core_data(x)
```

Arguments

x output of abstract_retrieval or article_retrieval, with both get_statement and content

Value

A character vector of bibtex values

Note

Adapted from https://github.com/pybliometrics-dev/pybliometrics/blob/master/pybliometrics/scopus/abstract_retrieval.py

```
api_key = get_api_key(NULL, error = FALSE)
if (!is.null(api_key)){
    x = abstract_retrieval("S1053811915002700", identifier = "pii",
    verbose = FALSE)
    res = bibtex_core_data(x)
    cat(res)
    x = abstract_retrieval("S1053811915002700", identifier = "pii",
    verbose = FALSE)
    res2 = bibtex_core_data(x)
    cat(res2)
}
```

14 citation_retrieval

citation_retrieval

SCOPUS Citation Retrieval

Description

SCOPUS Citation Retrieval

Usage

```
citation_retrieval(scopus_id = NULL, pii = NULL, doi = NULL,
   pubmed_id = NULL, date_range = NULL, ...)
parse_citation_retrieval(result)
```

Arguments

scopus_id	Scopus Identifier
pii	Scopus Identifier
doi	Scopus Identifier
pubmed_id	Scopus Identifier
date_range	date range to specify, must be length 2
	Arguments to be passed to generic_elsevier_api
result	result from citation_retrieval, which has an element of content

Value

List of elements, similar to generic_elsevier_api

See Also

```
generic_elsevier_api
```

collapse_affil 15

Description

Take an individual SCOPUS entry and transform it to a data frame of affiliations

Usage

```
collapse_affil(affils, collapse = ";")
```

Arguments

affils Data frame of affiliations to be collapsed usually from author_search

collapse What should values be collapsed using as a separator

Value

A data. frame of affiliation information

```
complete_multi_author_info

Get Complete Author Information and ID from Scopus
```

Description

Get Complete Author Information and ID from Scopus

Usage

```
complete_multi_author_info(au_id = NULL, api_key = NULL,
  verbose = TRUE, ...)
```

Arguments

au_id vector of Author IDs
api_key Elsevier API key

verbose Print messages from specification

... options to pass to generic_elsevier_api

Value

List of information

16 embase_retrieval

elsevier_authenticate Authenticate API Key and get Token

Description

Authenticate API Key and get Token

Usage

```
elsevier_authenticate(api_key = NULL, api_key_error = TRUE,
    choice = NULL, verbose = TRUE, headers = NULL, ...)
```

Arguments

```
api_key Elsevier API key
api_key_error Should there be an error if no API key?
```

choice Choice of which registered See https://dev.elsevier.com/tecdoc_api_authentication.

html

verbose Print messages from specification

headers Headers passed to add_headers, passed to GET

... Additional arguments to send to GET.

Value

List of content, the GET request, and the token

Examples

```
if (have_api_key()) {
   auth = elsevier_authenticate()
}
```

embase_retrieval

SCOPUS Embase Retrieval

Description

This function wraps <code>generic_elsevier_api</code> to give a retrieval of an Embase Entry from the Elsevier Embase Retrieval API

Usage

```
embase_retrieval(id, identifier = c("lui", "pii", "doi", "embase",
   "pubmed_id", "medline"), http_end = NULL, ...)
```

entitlement_retrieval 17

Arguments

Value

List of elements, similar to generic_elsevier_api

See Also

```
generic_elsevier_api
```

Examples

```
api_key = get_api_key(NULL, error = FALSE)
if (!is.null(api_key)){
    x = embase_retrieval("S1053811915002700", identifier = "pii",
    verbose = FALSE)
}
```

entitlement_retrieval ScienceDirect Text Entitlement Retrieval

Description

This function wraps <code>generic_elsevier_api</code> to give a retrieval of an entitlement from the Elsevier Text Entitlement API

Usage

```
entitlement_retrieval(id, identifier = c("scopus_id", "eid", "doi",
   "pii", "pubmed_id"), http_end = NULL, ...)
```

Arguments

id Identifier for entitlementidentifier Type of identifier to usehttp_end any additional end to http statement. See generic_elsevier_api... Arguments to be passed to generic_elsevier_api

Value

List of elements, similar to generic_elsevier_api

See Also

```
generic_elsevier_api
```

Examples

```
api_key = get_api_key(NULL, error = FALSE)
if (!is.null(api_key)){
    x = entitlement_retrieval("S1053811915002700", identifier = "pii",
    verbose = FALSE)
}
```

entries_to_affil_list List of SCOPUS Entries to List of Affiliations Data Frames

Description

Take a SCOPUS entry and transform it to a data frame of affiliations

Usage

```
entries_to_affil_list(entries)
```

Arguments

entries

list of entries from SCOPUS, usually from author_search result

Value

A data. frame of affiliation information

```
entries_to_citation_df
```

List of SCOPUS Entries to Data Frame of Citations

Description

Take a SCOPUS entry list and transform it to a data frame of citation and article information

Usage

```
entries_to_citation_df(entries)
```

Arguments

entries

list of entries from SCOPUS, usually from author_search result

Value

A data. frame of citation information

entries_to_df

~~+	ries	+ ~	ᆚ도
$e_{\rm III}$	1168	1()	(11)

Convert Entries into a data.frame

Description

Converts a list of entries into a data. frame of records

Usage

```
entries_to_df(entries, au_id = NULL, verbose = TRUE)
entries_to_df2(entries, verbose = TRUE)
```

Arguments

entries Entries from the output of a command

au_id Author ID number. Overrides any first/last name argument

verbose Print diagnostic messages

Value

Data frame of records

entry_to_affil

SCOPUS Entry to Affiliation

Description

Take an individual SCOPUS entry and transform it to a data frame of affiliations

Usage

```
entry_to_affil(x, all_affils)
```

Arguments

x individual entry from SCOPUS, usually from author_searchall_affils Affiliation data.frame from all_possible_affils

Value

A data. frame of affiliation information

20 generic_elsevier_api

```
generic_elsevier_api Generic Elsevier Search
```

Description

Runs GET on generic Elsevier Search

Usage

```
generic_elsevier_api(query = NULL, type = c("search", "article",
   "entitlement", "recommendation", "object", "fragment", "abstract",
   "affiliation", "embase", "author", "serial", "nonserial", "subject",
   "holdings", "citation-count", "citations", "metadata", "ev",
   "ev_records", "analytics"), search_type = c("affiliation", "author",
   "scopus", "scidir", "scidir-object", "sciencedirect", "plumx"),
   api_key = NULL, headers = NULL, content_type = c("content",
   "feedback"), root_http = "https://api.elsevier.com", http_end = NULL,
   verbose = TRUE, api_key_error = TRUE, ...)
```

Arguments

query	Query to run, not overall query, but 'queryParam' query
type	Type of search. See https://dev.elsevier.com/api_docs.html
search_type	Type of search if type = "search". See https://dev.elsevier.com/api_docs.html
api_key	Elsevier API key
headers	Headers passed to add_headers, passed to GET
content_type	Is the data content or feedback?
root_http	address to use for query
http_end	string to add to end of http specification (done using paste0)
verbose	Print messages from specification
api_key_error	Should there be an error if no API key?
	Options passed to queryParam for GET

Value

List of elements, content and the GET request

gen_entries_to_df 21

gen_entries_to_df

Generally Convert Entries into a list of data. frames

Description

Generally Convert Entries into a list of data. frames

Usage

```
gen_entries_to_df(entries, scrub = FALSE)
```

Arguments

entries Entries from the output of a command

scrub Should 'scrub_identifier' be run on the identifier?

Value

List of data. frames from entries

```
get_affiliation_info Get Affiliation Information and ID from Scopus
```

Description

Uses SCOPUS affiliation search to identify affiliation identification information

Usage

```
get_affiliation_info(affil_id = NULL, affil_name = NULL,
    api_key = NULL, verbose = FALSE, headers = NULL)
```

get_api_key

Arguments

affil_id ID of affiliation
affil_name name of affiliation
api_key Elsevier API key

verbose Print messages from specification

headers Headers passed to add_headers, passed to GET

Value

A data. frame of affiliation information

get_api_key

Find API Key for Elsevier

Description

Determines if option(elsevier_api_key) or option(elsevier_api_key_filename) is set. If not, it stops and returns an error. If so, returns the value.

Usage

```
get_api_key(api_key = NULL, error = TRUE)
have_api_key(api_key = NULL)
```

Arguments

api_key Elsevier API key

error Should the function error if api_key = NULL?

Value

API key

Note

You can either set the API key using option(elsevier_api_key) or have it accessible by api_key = Sys.getenv('Elsevier_API').

```
res = get_api_key(error = FALSE)
```

get_author_info 23

get_author_info

Get Relevant Author Information and ID from Scopus in Data Frame

Description

Uses SCOPUS author search to identify author identification information in a workable format

Usage

```
get_author_info(...)
```

Arguments

... Arguments passed to get_complete_author_info

Value

Data.frame of information

See Also

```
get_complete_author_info
```

Examples

```
## Not run:
get_author_info(au_id = "40462056100")
## End(Not run)
```

```
get_complete_author_info
```

Get Complete Author Information and ID from Scopus

Description

Uses SCOPUS author search to identify author identification information

Usage

```
get_complete_author_info(last_name = NULL, first_name = NULL,
    affil_id = NULL, affil_name = NULL, api_key = NULL,
    http = "https://api.elsevier.com/content/search/author",
    query = NULL, count = 200, start = 0, verbose = TRUE,
    au_id = NULL, headers = NULL, ...)
```

24 get_links

Arguments

last_name	last name of author
first_name	first name of author
affil_id	ID of affiliation (optional)
affil_name	name of affiliation
api_key	Elsevier API key
http	Author API http
query	Additional query info, added using +AND+ to original query
count	maximum number of records to retrieve
start	index to start on. Only necessary if a large number of records retrieved
verbose	Print messages from specification
au_id	Author ID number, will override first/last combination if specified
headers	Headers passed to add_headers, passed to GET
	options to pass to GET

Value

List of information

Examples

```
if (have_api_key()) {
  res = get_complete_author_info(
  last_name = "Muschelli",
  first_name = "John",
  verbose = FALSE)
}
```

get_links

Get Links for next/first/last query

Description

Get Links for next/first/last query

Usage

```
get_links(result)
get_url(result, type = c("self", "first", "prev", "next", "last"))
next_url(result)
last_url(result)
```

inst_token_header 25

```
prev_url(result)

self_url(result)

first_url(result)

get_link_type(result, ..., type = c("self", "first", "prev", "next", "last"))

get_first(result, ...)

get_last(result, ...)

get_prev(result, ...)

get_next(result, ...)

get_self(result, ...)
```

Arguments

result Object (list) with an element named content, usually from generic_elsevier_api
type The type of link requested
Options passed to GET

Value

A data. frame or a vector of characters

Examples

```
## Not run:
result <- generic_elsevier_api(
query = "ISSN(0004-3702) AND YEAR(2001)",
search_type = "scopus")
next_result = get_next(result)
## End(Not run)</pre>
```

inst_token_header

Add Institution or Authorization Token

Description

Add Institution or Authorization Token

26 metadata_retrieval

Usage

```
inst_token_header(token)
auth_token_header(token)
```

Arguments

token

Elsevier API token, usually from elsevier_authenticate

Value

An object of class token, but really a character

metadata_retrieval

SCOPUS Citation Retrieval

Description

SCOPUS Citation Retrieval

Usage

```
metadata_retrieval(query = NULL, view = c("STANDARD", "COMPLETE"), ...)
```

Arguments

query Query to run, not overall query, but 'queryParam' query
view Type of view to have. See https://dev.elsevier.com/guides/ArticleMetadataViews.
htm
... Arguments to be passed to generic_elsevier_api

Value

List of elements, similar to generic_elsevier_api

See Also

```
generic_elsevier_api, https://dev.elsevier.com/documentation/ArticleMetadataAPI.
wadl
```

```
api_key = get_api_key(NULL, error = FALSE)
if (!is.null(api_key)){
    x = metadata_retrieval(query = "heart attack",
    verbose = FALSE)
}
```

multi_author_info 27

multi_author_info

Get Relevant Authors Information from IDs from Scopus

Description

Get Relevant Authors Information from IDs from Scopus

Usage

```
multi_author_info(...)
process_complete_multi_author_info(res)
```

Arguments

```
... Arguments passed to get_complete_author_info
res result from complete_multi_author_info
```

Value

Data.frame of information

See Also

```
get_complete_author_info
```

Examples

```
## Not run:
multi_author_info(au_id = c("22968535800", "40462056100"))
## End(Not run)
```

nonull

Remove NULL

Description

Removes NULL values from a vector from a list

Usage

```
nonull(x, replace = NA)
```

28 object_retrieval

Arguments

x Vector from a list

replace Value to replace NULL with

Value

Vector

object_retrieval

ScienceDirect Object Retrieval

Description

This function wraps <code>generic_elsevier_api</code> to give a retrieval of an object from the Elsevier Object Retrieval API

Usage

```
object_retrieval(id, identifier = c("scopus_id", "eid", "doi", "pii",
    "pubmed_id"), ref = NULL, http_end = NULL, ...)

process_object_retrieval(res)

download_object(url, api_key = NULL, api_key_error = TRUE,
    verbose = TRUE, headers = NULL, ...)
download_objects(url, ...)
```

Arguments

id Identifier for objectidentifier Type of identifier to useref document reference

http_end any additional end to http statement. See generic_elsevier_api

... Arguments to be passed to generic_elsevier_api or GET

res result from object_retrieval

url url to download from object_retrieval

api_key Elsevier API key

api_key_error Should there be an error if no API key?
verbose Print messages from specification

headers Headers passed to add_headers, passed to GET

plumx_metrics 29

Value

List of elements, similar to generic_elsevier_api

See Also

```
generic_elsevier_api
```

Examples

```
api_key = get_api_key(NULL, error = FALSE)
if (!is.null(api_key)){
  x = object_retrieval("S1053811915002700", identifier = "pii",
  verbose = FALSE)
  df = process_object_retrieval(x)
  df = df[ grepl("image/jpeg", df$mime_type),,drop = FALSE ]
  df = df[ df$type %in% "IMAGE-HIGH-RES",,drop = FALSE ]
  res = download_object(df$url[1])
   if (interactive()) {
     browseURL(res$outfile)
  } else {
     img = res$content
     dims = dim(img)[1:2]
     mdim = max(dims)
    graphics::plot(c(0, ncol(img)), c(0, nrow(img)), type='n')
    graphics::rasterImage(img, 1, 1, ncol(img), nrow(img))
  }
}
```

plumx_metrics

Retrieve PlumX metrics for Scopus documents and other related artifacts

Description

Retrieve PlumX metrics for Scopus documents and other related artifacts

Usage

```
plumx_metrics(value, type = plumx_types(), ...)
plumx_types()
```

Arguments

The value of the identifier to search for.
The type of identifier to search for.
Additional arguments to pass to generic_elsevier_api, other than http_end, type, search_type, and content_type

Value

List of elements, content and the GET request

Note

See https://dev.elsevier.com/documentation/PlumXMetricsAPI.wadl for more information

Examples

```
if (have_api_key()) {
type = "doi"
value = "10.1016/j.nicl.2018.10.013"
res = plumx_metrics(value, type)
}
```

```
print.scopus_api_key Print method for Scopus API key
```

Description

Print method for Scopus API key

Usage

```
## S3 method for class 'scopus_api_key'
print(x, reveal = FALSE, ...)
```

Arguments

```
    x an object used to select a method.
    reveal Should the API key be revealed
    ... further arguments passed to or from other methods
```

```
x = "asdf"
class(x) = "scopus_api_key"
print(x)
print(x, reveal = TRUE)
```

print.token 31

print.token

Print method for token

Description

Print method for token

Usage

```
## S3 method for class 'token'
print(x, reveal = FALSE, ...)
reveal(x, ...)
```

Arguments

x an object used to select a method.
reveal Should the token be revealed
... further arguments passed to or from other methods

Examples

```
x = "asdf"
class(x) = "token"
print(x)
print(x, reveal = TRUE)
```

```
process_affiliation_name
```

Process Affiliation Name

Description

Process Affiliation ID and names for generic use

Usage

```
process_affiliation_name(affil_id = NULL, affil_name = NULL,
    api_key = NULL, verbose = TRUE)
```

Arguments

```
affil_id Affiliation ID number.
affil_name affiliation name
api_key Elsevier API key
verbose Print diagnostic messages
```

32 process_author_name

Value

List of affiliation name and affiliation ID

Description

Process author ID and names for generic use

Usage

```
process_author_name(au_id = NULL, last_name = NULL,
  first_name = NULL, affil_id = NULL, api_key = NULL,
  verbose = TRUE, headers = NULL)
```

Arguments

au_id	Author ID number. Overrides any first/last name argument
last_name	last name of author
first_name	first name of author
affil_id	ID of affiliation (optional)
api_key	Elsevier API key
verbose	Print diagnostic messages
headers	Headers passed to add_headers, passed to GET

Value

List of first/last name and author ID

Note

This function is really to avoid duplication

read_cto 33

read_cto

Read Citation Overview (CTO) File

Description

Read Citation Overview (CTO) File

Usage

```
read_cto(file)
read_cto_long(file)
```

Arguments

file

CSV of CTO export from Scopus

Value

A list of the data, year columns, and header information

Examples

```
file = system.file("extdata", "CTOExport.csv", package = "rscopus")
citations_over_time = read_cto(file)
citations_over_time = citations_over_time$data
```

recommendation_retrieval

ScienceDirect Article Recommendation Retrieval

Description

This function wraps generic_elsevier_api to give a retrieval of a recommendation from the Elsevier Article Recommendation API

Usage

```
recommendation_retrieval(id, identifier = c("eid", "pii"),
  http_end = NULL, ...)
```

Arguments

id Identifier for recommendationidentifier Type of identifier to use

http_end any additional end to http statement. See generic_elsevier_api

... Arguments to be passed to generic_elsevier_api

34 replace_non_ascii

Value

List of elements, similar to generic_elsevier_api

See Also

```
generic_elsevier_api
```

Examples

```
api_key = get_api_key(NULL, error = FALSE)
if (!is.null(api_key)){
    x = recommendation_retrieval("S1053811915002700", identifier = "pii",
    verbose = FALSE)
}
```

replace_non_ascii

Replace non-ASCII characters

Description

Replaces non-ASCII characters from a last or first name

Usage

```
replace_non_ascii(string)
```

Arguments

string

Character vector of values to be replaced

Value

Character vector

See Also

 $Taken\ from\ https://stackoverflow.com/questions/20495598/replace-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accented-characters-in-r-with-non-accent$

scopus_search 35

Description

This function wraps <code>generic_elsevier_api</code> to give a scopus search from the Elsevier Scopus Search API

Searches SCOPUS to get information about documents on an author.

Usage

```
scopus_search(query, api_key = NULL, count = 200,
   view = c("STANDARD", "COMPLETE"), start = 0, verbose = TRUE,
   max_count = 20000,
   http = "https://api.elsevier.com/content/search/scopus",
   headers = NULL, wait_time = 0, ...)
sciencedirect_search(count = 100, ...)
scidir_search(count = 100, ...)
```

Arguments

query	Query string to search on SCOPUS
api_key	API Key for Elsevier
count	number of records to retrieve (below 200 for STANDARD, below 25 for COMPLETE views, see https://dev.elsevier.com/api_key_settings.html).
view	$type\ of\ view\ to\ give, see \ https://api.elsevier.com/documentation/ScopusSearchAPI.$ wadl
start	where should the records start gathering
verbose	Print diagnostic messages
max_count	Maximum count of records to be returned.
http	Address for scopus API
headers	additional headers to be added to add_headers
wait_time	The time in seconds to wait across consecutive requests of a single search (when records > 25)
	Arguments to be passed to the query list for GET

Value

List of entries from SCOPUS

36 subject_areas

Examples

```
if (have_api_key()) {
  res = scopus_search(query = "all(gene)", max_count = 20,
  count = 10)
  df = gen_entries_to_df(res$entries)
  head(df$df)
  sci_res = sciencedirect_search(query = "heart+attack AND text(liver)",
  max_count = 30, count = 25)
  sci_df = gen_entries_to_df(sci_res$entries)
  Sys.sleep(2)
  nt = sciencedirect_search(query = "title(neurotoxin)", max_count = 20,
  count = 10, wait_time = 1)
  nt_df = gen_entries_to_df(nt$entries)
  nt_df = nt_df$df
}
```

set_api_key

Set API Key for Elsevier

Description

Sets Elsevier API key using if option(elsevier_api_key)

Usage

```
set_api_key(api_key)
```

Arguments

api_key

Elsevier API key

subject_areas

Subject Areas

Description

Subject Areas

Usage

```
subject_areas()
subject_area_codes()
```

Value

Character vector of subject areas

subject_areas 37

Note

See https://service.elsevier.com/app/answers/detail/a_id/15181/supporthub/scopus/related/1/
